Education

Duke University **Durham, NC**

B.S. in Computer Science and Statistics, Concentration in AI and Data Science May 2028

Relevant Coursework: Database Systems, Probability, Machine Learning, Regression Analysis, Data Mining and AI

Campus Involvement: Catalyst Tech Org (New Member Education Chair), Product Space, Scale & Coin (Former New Member Education Chair), DefMo Dance Team (Treasurer)

Experience

WRAPT **Remote**

Founding Engineer Oct. 2026 – Present

- Scoped a launchable MVP within a 1.5-month timeline by converting the founders' brief into a 6-milestone roadmap, deprioritizing payment-dependent group gifting and delivering Secret Santa as a lower-risk alternative
- Aligned founders on a React Native + Supabase stack by evaluating 5 frontend and 5 backend options in an architecture, data model, and risk memo
- Kept inference cost and latency low for personalized gift recommendations by building a rule-based engine ranking gifts across 7 weighted taste signals and restricting LLM use to one-time onboarding parsing
- Building the app from zero to TestFlight beta, including onboarding, authentication, user profiles, and a PostgreSQL data model with row-level security

Amazon **Seattle, WA**

Software Development Engineer Intern May 2026 – Aug. 2026

- Defined problem scope and requirements for an AWS Network Load Balancer incident-analysis tool by interviewing on-call operators and engineers and analyzing COE reports and tickets; owned milestones and timeline
- Cut incident investigation from hours to minutes and reduced data latency 92% (1 hour to 5 minutes) by delivering a 50K+ events/sec data lake that operators query via Athena SQL across 150K targets per region
- Enabled multi-source data ingestion, eliminating all 22 Kafka dependencies, by designing a source-agnostic ingestion layer deployable across all AWS regions

Amazon **Seattle, WA**

Software Development Engineer Intern May 2025 – Aug. 2025

- Automated recovery of unhealthy Kafka aggregators by building a self-healing module that terminates degraded hosts for Auto Scaling replacement
- Prevented cascading failures with a concurrency-safe lock limiting simultaneous instance self-terminations
- Avoided false-positive terminations by implementing low-latency health evaluation logic to handle noisy, incomplete metric streams

Bank of America x JEVS **Philadelphia, PA**

Data Analyst Student Intern Jun. 2024 – Aug. 2024

- Increased program commitment ∼70% through phone outreach targeted by drop-off findings from demographic analysis across 8K+ Salesforce records
- Cut daily report update time from up to 1 hour to 5 minutes by automating Excel reporting templates with pivot tables and formulas for cross-functional teams

Empowering Minds **Remote**

Founder and Math Tutor May 2021 – Present

- Scaled a tutoring business to 20 students globally by recruiting, training, and managing 7 Math and English tutors
- Saved 5+ hours/week and eliminated missed lessons by building a Telegram bot that automates scheduling, confirmations, rescheduling, and parent progress updates

Skills

Product: User Interviews, Requirements Definition, Roadmapping, Funnel Analysis, Stakeholder Management
Languages: Python, Java, JavaScript, SQL, R, C++
Frameworks: React Native, Expo, Node.js, Flask, TensorFlow/Keras
Developer Tools: AWS (S3, Athena, CloudWatch, EC2), Kafka, PostgreSQL, Supabase, Docker, Git, VS Code, IntelliJ, Google Colab
